AGATA/A

For All Physiques and Working Postures

AGATA/A provides firm and comfortable support for all working postures. This highly refined design is crammed with unique functions and extraordinary originality to create a quality working experience.

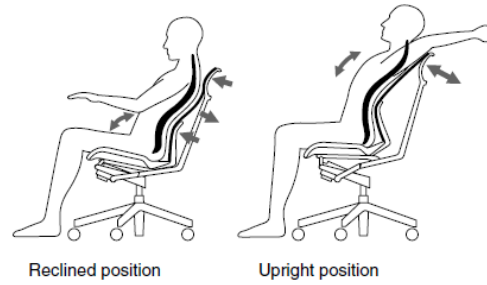

The Design Focused on
Achieving
Both Great Ease-of-use and
Functionality

Support All Postures.
The frame of AGATA/A has a gentle flowing form.
The aluminum part is one of characteristic of AGATA/A
As a part of not only function but also the design.
The chair has a simple design that offers enhanced flair
and functionality, such as control levers located at a
single position.

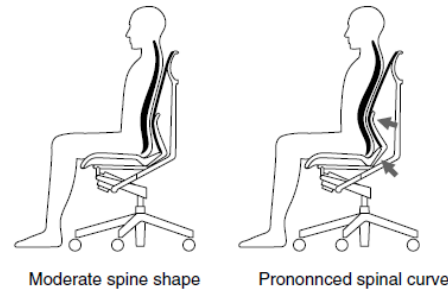

One Chair, Two Backrest Systems

■ Posture

■ Personalized comfort

Posture

Smooth rocking is achieved with fully synchronized movement of the backrest and seat. Capable of tilting at a large angle, this chair allows the user to sit in a more relaxed position, while supporting the shoulders and maintaining good posture. Rocking position can be fixed at any designed point with one of function lever under the seat at the right side. When the seat is in an upright position, rocking mechanism can be fixed and the backrest can be tilted by lowering the lever.

Personalized comfort

Each person has different shape of spine; some have flat spines that bend a little, while others have strong curves in their spines. Therefore, a comfortable backrest must have different functions for different people. The AGATA/A incorporates a system that simultaneously raises the lumbar and pelvic support, enabling the shape of the backrest to be adjusted to suit the user. Thanks to the diverse backrest shapes, this chair offers ultimate personalized comfort. This operation is also controlled by the lever under the seat at the right.

1. Synchronized Mechanism

The comfortable backrest and seat provide optimum support when working or relaxing in a reclined position. (Rocking angle : 23°)

2. Backrest Tilting

In the upright position, the backrest moves according to the body movements to create the sensation of a flexible fit.

3. Backrest Shape Adjustment

The Backrest shape adjustment provides comfortable sitting support to suit the user's back with the lever under the right side of the seat. (Operates on the lumbar and pelvic areas simultaneously.)

4. Seat Height

The seat height can be adjusted with a single touch to suit the desk height and the user's physique and working posture. Seat adjustment is also controlled by a lever under the seat at the right. (Stroke : 90mm)

5. Seat Depth

The seat can be adjusted backwards or forwards to accommodate the personal preferences of the user. Adjustment is carried out by the lever under the right side of the seat to fix the seat at desired position. (Stroke : 45mm)

6. Headrest Tilting

In the reclined position, the headrest provides support and lightens the load on the neck. It comfortably supports the head when the user wants to look up or relax. It can be easily adjusted backwards or forwards to meet the user's needs. (Adjustable angle : 30°)

7. Multi-adjustable Armrest (Vertical Adjustment)

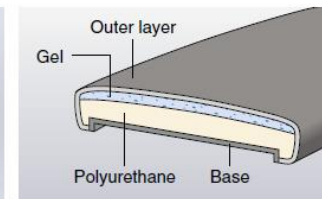

The height of the armrests can be adjusted to suit the desk height and the user's physique. (Stroke : 100mm)

8. Multi-adjustable Armrest (Lateral Adjustment)

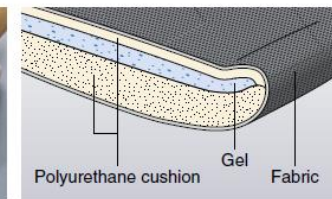

The adjustable armrests are convenient for keyboard and mouse operation. The armrests can be turned inward to provide arm support and reduce fatigue, particularly when spending long hours typing.

■ Armrest

■ Seat

Armrest and Seat Materials Technogel®

The AGATA/A uses an extremely durable gel in its armrest cushions and seat called Technogel®. When a body weight is applied to it, Technogel® spreads in three dimensions to disperse the pressure and prevent a concentration of pressure at any one part of the body.
